

RFQ Test Case A - Nominal / Complete Package

Supplier-side internal validation document

1. Project Overview

Customer	Program	Part Name	Part Number	SOP	Annual Volume
NorthBridge Automotive	NB-EV Crossover	Front Seat Reinforcement Bracket	NB-SS-2147	2027-03-01	180,000 pcs

This RFQ requests quotation for a stamped steel bracket used in the front seat structure. The supplier shall quote piece price, tooling, packaging, PPAP, and logistics assumptions using the attached Excel template.

2. Technical Requirements

- Manufacturing process: progressive die stamping plus one forming operation.
- Material: SPCC, 1.20 mm nominal thickness, per customer material specification NB-MAT-044.
- Critical dimensions per attached drawing; general tolerance +/-0.10 mm unless otherwise specified.
- Surface finish: oil-free, burr height less than 0.05 mm, no red rust at receipt.
- No welding required for this part number.

3. Quality Requirements

- PPAP Level 3 submission required before SOP.
- Initial capability target: Cpk >= 1.67 on critical characteristics.
- One annual layout inspection required.
- Supplier shall maintain PFMEA, Control Plan, and process flow.

4. Commercial Requirements

Incoterm	Payment Terms	Annual Cost Reduction	Tooling Ownership	Quote Currency
FOB Shanghai	Net 60	2 percent after Year 1	Customer owned	USD

5. Required Attachments in This Test Case

- Attachment A1 - Cost_Template.xlsx
- Attachment A2 - Part_Drawing.pdf
- Attachment A3 - Packaging_Spec.pdf
- Attachment A4 - Supplier_Questionnaire.xlsx

Review expectation

This case is intended to behave like a generally complete RFQ package. The parser should extract core fields cleanly, and the gap engine should return only minor commercial and cost attention points.
