

RFQ Test Case C - High Risk

Supplier-side internal validation document

1. Project Overview

Customer	Program	Part Name	Part Number	SOP	Annual Volume
NorthBridge Automotive	NB-EV Premium	Seat Side Impact Reinforcement	NB-SI-3411	2027-02-01	150,000 pcs

This RFQ is a high-risk test case intended to trigger multiple gap and commercial risk rules. The requested part is similar to the historical family but stricter in tolerance, quality, and logistics.

2. Technical Requirements

- Manufacturing process: progressive die stamping plus forming plus in-line camera inspection.
- Material: SPFC980Y, 1.80 mm nominal thickness.
- Critical hole position tolerance +/-0.03 mm; flatness 0.15 mm max.
- 100 percent appearance inspection required.
- Burr height less than 0.03 mm; edge crack not allowed.
- Supplier-funded gauges require customer approval.

3. Quality Requirements

- PPAP Level 5 required.
- Run at rate and full dimensional report required.
- Critical characteristics require Cpk ≥ 1.67 at SOP and ≥ 1.33 ongoing.
- Annual revalidation and corrosion test retention required.

4. Commercial Requirements

Incoterm	Payment Terms	Annual Cost Reduction	Currency	Freight
DDP Monterrey	Net 120	4 percent every year	USD	Supplier managed

5. Packaging and Logistics

- Returnable rack required; one-way packaging is not accepted.
- Customer label plus supplier traceability label both required.
- Premium freight recovery not allowed after nomination.

6. Required Attachments

- Attachment C1 - Cost_Template.xlsx
- Attachment C2 - Part_Drawing.pdf
- Attachment C3 - Packaging_Spec.pdf
- Attachment C4 - Supplier_Questionnaire.xlsx

Review expectation

Elevated risk score expected. Key triggers: PPAP escalation, tighter tolerance, supplier-funded gauges, DDP freight, annual price down, and Net 120 terms.
